## DROP TABLE

DROP TABLE — remove a table

### Synopsis

DROP TABLE [ IF EXISTS ]

*name*

[, ...] [ CASCADE | RESTRICT ]

### Description

DROP TABLE removes tables from the database. Only the table owner, the schema owner, and superuser can drop a table. To empty a table of rows without destroying the table, use [DELETE](#) or [TRUNCATE](#).

DROP TABLE always removes any indexes, rules, triggers, and constraints that exist for the target table. However, to drop a table that is referenced by a view or a foreign-key constraint of another table, CASCADE must be specified. (CASCADE will remove a dependent view entirely, but in the foreign-key case it will only remove the foreign-key constraint, not the other table entirely.)

### Parameters

IF EXISTS

Do not throw an error if the table does not exist. A notice is issued in this case.

*name*

The name (optionally schema-qualified) of the table to drop.

## CASCADE

Automatically drop objects that depend on the table (such as views), and in turn all objects that depend on those objects (see [Section 5.15](#)).

## RESTRICT

Refuse to drop the table if any objects depend on it. This is the default.

## Examples

To destroy two tables, `films` and `distributors`:

```
DROP TABLE films, distributors;
```

## Compatibility

This command conforms to the SQL standard, except that the standard only allows one table to be dropped per command, and apart from the `IF EXISTS` option, which is a PostgreSQL extension.

## Submit correction

If you see anything in the documentation that is not correct, does not match your experience with the particular feature or requires further clarification, please use [this form](#) to report a documentation issue.
