R Reading

1. Read the text and tick the sentences true (T) or false (F) according to the text. **(5 × 2 = 10 points)**

WHAT IS HARDWARE?

Computer hardware is the physical components of a computer. Any part of the computer that you can touch is counted as part of the computer's hardware.

These parts include the keyboard, which is used to input text and commands onto the computer. There's the mouse, which is used to control the cursor on your monitor, or computer screen. The monitor is also a part of the computer's hardware.

There are also parts of computer hardware that you don't see or interact with as often as the keyboard or mouse. These are parts like the central processing unit, sometimes called the CPU. The CPU is part of the electronic circuitry in your computer that completes tasks like processing data.

(www.twinkl.es/teaching-wiki/difference-between-hardware-and-software)

	True	False
1. Every part of a computer is hardware.	☐	☐
